## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-24 are allowed.
2. The following is an examiner's statement of reasons for allowance: the prior art of record doesn't teaches that the frequency or how often a node is broadcast its routing information (e.g. routing table) according to the term "mobility factor" that is defined by the applicant's specification in which is state in paragraph 0031. According to paragraph 31

if a set of fixed nodes (IAPs 106 and wireless fixed routers 107) have existed as neighbors of the mobile node for relatively long periods of time, it is determined that this node is stationary. However, if there is any notable change in these factors including variations in the distances between the mobile node and the fixed nodes and the changing of fixed nodes in an out of the mobile node's list of known neighbors, that mobile node is determined to be mobile. The rate at which these events occur is therefore referred to as the mobility factor for the mobile node.

Therefore, according to the definition of applicant's specification, the prior art of record doesn't teaches the term "mobility factor" based on the definition of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gandolfo (US 20030224787A1) discloses system and method of communication between multiple point-coordinated wireless networks.
